System Integrator
Contour Advanced Systems also acts in a project environment. In these, often military orientated markets, Contour regularly is a System Integrator with a focus on total system solutions. Contour translates knowledge and innovation into the best solution for it's customers by an integrated "plan – build – operate" process.

Supply Chain Management
Contour Advanced Systems is specialized in design, built, integration, maintain[24/7] test and document of turn key system solutions. Control of the complete supply chain is an aspect that Contour embedded fully in her organization. For projects, specials products and series productions, Contour therefore is partner of many Original Equipment Manufacturers.

Capabilities & Quality
Next to the skills for system solutions Contour has the necessary knowledge, among other, in the field of EMP/EMC, [extreme] climate [A1/C1], ABC, Shock & Vibration & Drop test. Certificates as i.e. ISO 9001, ISO 14001, AQAP 2110, VCA, STEK AND BRL 6001 guarantees the high tech processes. For military projects Contour has the availability of an MOD quality employee. Because of her possibilities, process control and quality assurance, Contour is your best partner in business.

CONTOUR

Specialist in precision Sheet Metal
Contour is active as supplier and partner in business of Original Equipment Manufacturers, mainly in Western Europe. From design up and till logistical services with a clear focus on (machine)frames, cabinets, housings, machine covering and [electro]-mechanical assemblies.

Innovative
By continuously investing in knowledge, skills, production-automation and ICT, Contour develops, produces and assembles as efficient as possible. Our goal is to create the best innovative solution for our customers that directly offers added value in their market.

Market oriented
Based on our expertise of product development, production and assembly, we would like to create such a solution for your ideas and products that it is profitable for you. The additional flexibility and the complete cost awareness asked by the market, are embedded in the culture of Contour. Just like openness and mutual confidence, to be your best possible partner in business.

TECHNOLOGY

Covering several technologies as engineering, sheet metal production and assembly is evident for Contour. Therefore Contour invests constantly in improving knowledge, skills, systems as well as production and assembly facilities.

Engineering
By engineering products based on functional specifications, often together with engineers of our customers, an optimalisation route is attended already from the start of the project. The result is a product which is produced and assembled as efficient as possible. When Contour also controls and maintains the Technical Product Documentation, alterations and re-design can be processed quick and efficient taking into account the feasibility.

Sheet metal production
The sheet metal production is a specialism in which Contour already excels for years. Contour sees to it that always the most modern equipment is to their disposal in combination with furthrt production automation. Because of that the sheet metal products can be produced efficient, cost effective and in a constant good quality. The combination of an own modern powder coating installation in house makes that the throughput time is controlled.. Because of a quality assurance and quality reporting system, which is integrated in the processes, Contour has set a high standard.

Assembly
Assembly also has a long history at Contour. Because of the experiences which have been built up, the assembly is done as optimal as possible in a specific assembly environment. After this assembly everything is being prepared for transport, eventually in specially developped packaging

CONTOUR ADVANCED SYSTEMS

System Supplier
As a system supplier and system integrator, Contour Advanced Systems is a partner for Original Equipment Manufacturers, mainly in Western Europe. From design, development, engineering, complete assembly of modules and systems, up and till logistic services. Where applicable, including the necessary and requested tests and complete assembly on site. Lifecycle management and supply chain management therefore are aspects that are completely embedded in our organization.

Innovative
By using all knowledge and skills within the Contour Group, but certainly also by continuous investing in capabilities, skills and new developments, Contour always want to create the best possible solution. Creating added value for our customers , that is what we like to achieve.

Market orientated
Flexibility and complete c ost awareness, as usual in the market, are embedded in the culture of Contour. Even as translating market demands into an optimized solution with added value, based on an open relationship and mutual confidence between Contour and her customers. Our goal is, to be your best partner in business during the complete product lifecycle.
